AUTHOR	Stubbs, Kendon, Comp.; Buxton, David, Comp.
TITLE	Cumulated ARL University Library Statistics, 1962-63 through 1978-79.
INSTITUTION	Association of Research Libraries, Washington, D.C.
PUB DATE	81
NOTE	326p.
PUB TYPE	Statistical Data (110) -- Reports - Descriptive (141)
EDRS PRICE	MF01/PC14 Plus Postage.
DESCRIPTORS	*College Libraries; Enrollment; Federal Aid; Higher Education; Interlibrary Loans; Library Acquisition; Library Collections; Library Expenditures; Library Materials; Library Personnel; Microforms; *Research Libraries; Salaries; Serials
IDENTIFIERS	Book Binding Expenditures; *Library Statistics; University Expenditures

ABSTRACT

This cumulation provides access to historical statistics of research libraries in the United States and Canada, not including non-university members of the Association of Research Libraries (ARL). The publication has been produced from a computerized data file and incorporates corrections to the annual editions of ARL statistics. An explanatory introduction precedes an alphabetical list of institutions included, with notations of institution, type, and region codes and year of joining ARL. Annual data are then presented for: (1) library collections in terms of total volumes, volumes added in the current year, total microforms, and current serials; (2) interlibrary loans including originals and photocopies borrowed and loaned; (3) expenditures for library materials, current serials, binding, total salaries, and other operating costs; (4) library personnel recorded by number of professional, non-professional, and student assistant staff, and beginning and median professional salaries; and (5) university statistics comprising total enrollment, graduate enrollment, Ph.D.'s awarded, a Ph.D. field code indicating number of subject fields in which Ph.D.'s were awarded, and amounts of federal support and total university expenditure. Figures are not available for all research libraries in each of the categories of data. Cautions relating to the use of ARL statistics are provided. (ESR)

The Data, 1962-63--1978-79

Part 1: Institutions

Part 2: Collections

Part 3: Interlibrary Loans

Part 4: Expenditures

Part 5: Personnel

Part 6: University Data

INTRODUCTION

1. ARL Data

The annual issues of ARL Statistics, published by the Association of Research Libraries, represent the latest in a series of publications which began in the 1920's. For the years 1919-20 through 1961-62 the Princeton University Library annually issued statistics of university libraries. From 1961-62 the ARL assumed responsibility for the series, and has continued it to the present time.[1] Two earlier cumulations of the annual issues have appeared: College and University Library Statistics for 1919-20--1943-44 (University Microfilms AG1-OP30634); and Princeton University Library Statistics for 1944-45--1962-63 (University Microfilms Special Film No. S-338). The present cumulation thus joins the two earlier cumulations in providing access to the historical statistics of research libraries in the United States and Canada. (Note that this cumulation does not include the non-university members of the ARL, for which printed statistics are available only from 1974-75 to the present.)

This cumulation differs from the earlier ones in two respects. First, the other cumulations reproduced without change the annual editions of the statistics. For 1962-63--1978-79 the data were put into machine-readable form; and this cumulation displays the data from that data file. Second, the present work incorporates all corrections reported to the ARL Office for the annual editions of the ARL statistics. The errata are not numerous, however. It will be useful to comment on some of the kinds of corrections which have not been made.

Among libraries reporting for the ARL series there have clearly been differing perceptions over the years concerning what is to be counted in various categories. In the early 1960's, for example, there was much uncertainty whether to include volume-equivalents for microforms in the count of volumes held. When it became generally understood that microforms were to be excluded, some libraries showed decreases in volumes held in the annual statistics. Similarly, from the mid-1970's there has been confusion about what to include under current periodicals (nowadays, current serials)--whether, for example, to count only periodicals or all serials, whether to include government documents, and so on.

Another source of confusion in the data has been variation in the components of library systems included over the years. Law and medical libraries especially have tended to move into and out of the counts reported by individual institutions. Libraries on campuses separate from the main campus have sometimes been counted, sometimes not; or they have been consistently included by some institutions but not by others.

These vagaries in data collection over the years stand here as they appeared in the original annual issues of the statistics (unless corrections were reported by individual libraries). What was or was not counted in past library data collection practices has proved to be too well hidden in the mists of time. It has not been possible to impose consistency on the data for 1962-63--1978-79. One needs to be wary of the changing bases for reporting data. Even for a single institution over a few

year discrepancies may appear that will vitiate analysis if the data are not handled with care. It is for reasons like these that this cumulation begins with 1962-63, rather than the first ARL issue of 1961-62. That issue is flawed by omissions and inconsistencies that present considerable problems for data analysis. Such flaws are less evident from 1962-63; but the user of these data will do well to be on guard, especially for the earlier years of the data.

Further considerations on using the data appear in section 3 below.

2. University Data

To the library data reported in the annual ARL statistics this cumulation adds data on enrollments, Ph.D.'s awarded, Ph.D. fields, federal support for universities, and total university expenditures. These data are (except for Canadian institutions) from U.S. government agencies, and thus they may be considered the "official" data. Aside from numbers of Ph.D.'s awarded, it will be seen that the data are available only for relatively recent years.

One should not be misled into assuming that the official government data are cleaner than the ARL data. There are, in fact, egregious errors in the university data. For the early years of enrollments, for example, there are obvious problems in whether first-professional students are included in the count of graduate students. Throughout the data one can find peculiarities such as: the institution that reports the same total university expenditures two years in a row; another that claims 15,000 students one year, 10,000 the next two years, and 16,000 thereafter; another that has $400,000,000 in total expenditures one year and $290,000,000 the following year; and so on. Like the library data, moreover, the university data are subject to the same inconsistencies as to which components of an institution are included or excluded. If a medical library, for example, is counted in one year but not the next, similarly the university data will reflect medical school enrollments and expenditures in the first year but not the second. Thus, although these are the numbers accepted by federal and state agencies and published in various government documents, a user should be even more careful in drawing conclusions from them than from the library data.

3. Categories of the Data

The data in this work are arranged in six parts, concerning institutions, collections, interlibrary loans, expenditures, personnel, and university data. Within each part (except the first) the arrangement is by year. Thus, for example, to find volumes held for 1974-75, one would turn to that year in Part 2: Collections. Where there are blanks in the data, no data were reported. For instance, the ARL did not collect data on microforms for 1962-63, and so the column headed Microforms is blank for that year. In the same year three libraries did not report on volumes

added, gross; consequently, blanks appear for those libraries.

There are 34 categories of data. The following notes describe each of the categories.

Part 1: Institutions

1. Institution Number (INSTNO): The code numbers, increasing by 10's, from 010 to 980, for the 98 university libraries which were members of and reported data to the ARL in 1978-79. These numbers, divided by 10, are identical to the library code numbers in the 1978-79 ARL Statistics. Note, however, that 735 is assigned to St. Louis, which is no longer an ARL member and did not report data after 1972-73.

2. Institution (INAM): The names of the 98 university libraries (plus St. Louis) which were ARL members in 1978-79. In the 1979-80 ARL Statistics Joint University is succeeded by Vanderbilt.

3. Type (TYPE): 3 codes are used for TYPE:
   C = Canadian
   P = Private
   S = State-controlled, or public
   The designation as private or public is taken from the latest edition of Education Directory, Colleges & Universities published by the U.S. National Center for Education Statistics. In the historical data file the same code is used for a given institution for all years of data reported, even though there may have been, in several cases, a changing understanding between 1962 and 1979 of whether an institution was private or public.

4. Region (REGION): A number from 01 to 10 denotes the region of North America in which an institution is located. These codes are those used in the National Science Foundation University Science Statistics Program. The regions are
   01 = New England
   02 = Middle Atlantic
   03 = East North Central
   04 = West North Central
   05 = South Atlantic
   06 = East South Central
   07 = West South Central
   08 = Mountain
   09 = Pacific
   10 = Canada
   For the libraries and states included in each region, see the ARL Annual Salary Survey 1978-1979.[2]

5. Year Joined ARL (MEMBYR): With 5 exceptions, each library represented in this cumulation began to report data for the fiscal year during

which it became a member, and thereafter data for that library appear for each year through 1978-79. For example, Alabama joined the ARL in 1967, and Alabama data are reported for 1966-67 through 1978-79. Brown joined in 1932, and Brown data appear for 1962-63 through 1978-79. The five exceptions are: (1) Dartmouth joined in 1932, but did not begin reporting till 1968-69. (2) McGill joined in 1932, but first reported for 1963-64. (3) Massachusetts joined in 1968, but first reported in 1968-69. (4) New York, which joined in 1936, reported for all years but 1965-66. (5) St. Louis joined in 1963, first reported for 1962-63, but last reported for 1972-73, when its membership ended.

MEMBYR can therefore be used to select those institutions for which data are present in any given years. For example, if one wants to consider only the libraries which reported data for each of the 10 years 1969-70 through 1978-79, he will exclude St. Louis and all other libraries for which MEMBYR is 71 or greater.

Following are the numbers of institutions reporting in each year (that is, taking into consideration the effects of the 5 exceptions above, the numbers of ARL members each year):

1962-63:	63
1963-64:	64
1964-65:	64
1965-66:	63
1966-67:	70
1967-68:	71
1968-69:	76
1969-70:	76
1970-71:	78
1971-72:	78
1972-73:	81
1973-74:	82
1974-75:	88
1975-76:	94
1976-77:	94
1977-78:	94
1978-79:	98

Part 2: Collections

6. Volumes (VOLS): With one exception (St. Louis in 1965-66), VOLS is reported by every library in every year of these data. VOLS in fact would probably win a popularity contest as the library statistic thought to be most significant and most worthy of reporting. It is the more curious that there continues to be little agreement on what VOLS means. In the first place, Piternick has pointed out that it is at least rodomontade for a library to report, say, 2,351,842 volumes.[3] This is to claim accuracy to within better than one part in every million. Even an accuracy of one in ten thousand is perhaps unlikely in research libraries. More importantly,

as was noted above, there have been changing conceptions of what to include in VOLS. In the early sixties various libraries included volume-equivalents for microforms. Even up to the present, some libraries catalog documents or technical reports and count them as volumes; other do not. In some libraries fascicles and Lieferungen may be counted as volumes; in others only fascicles when bound together as volumes may be counted. It is peculiar to find so much diversity in what is still taken to be the preeminent library statistic.

7. Volumes added gross (VOLSADG): Reported for all years of data. Note that VOLSADG is intended to denote volumes cataloged (however individual libraries may interpret "cataloged"). VOLSADG does not necessarily measure volumes acquired. Thus, increases and decreases in VOLSADG are changes in numbers of volumes cataloged, not of volumes acquired.

8. Volumes added net (VOLSADN): Reported for all years of data. For a given institution VOLSADN should equal one year's volumes held minus the preceding year's volumes held. This equation does not hold true in some cases, especially in the early years of the data.

   In 4 instances in the annual statistics VOLSADN is a negative number (that is, typically a library withdrew more volumes than it cataloged). In order to avoid possible problems in the use of the computer data file, these 4 instances have been coded here as missing values. The 4 examples are: 1967-68, Tulane, VOLSADN = -1,527; 1972-73, Syracuse, -101,166; 1975-76, Columbia, -38,569; 1976-77, New York, -26,462.

9. Microforms (MICROF): Reported for 1967-68 through 1978-79. MICROF should be the total count of reels of microfilm, number of microcards, number of microprint sheets, and number of microfiche sheets.

10. Current Serials (CURRSER): Reported for 1971-72 through 1978-79. For 1971-72 through 1973-74 CURRSER was called "Current Periodicals" in the annual editions of the ARL statistics; from 1974-75 to the present it has been called "Current Serials". But even when this category was designated as periodicals, the instructions in the ARL statistics questionnaire used the same definition of periodicals that is now used of serials.[4] As a result, there has undoubtedly been considerable uncertainty as to what is to be counted in this category. We find, for example, that one library reports 32,000 CURRSER one year, 19,000 the next; another drops from 19,000 to 13,000 the following year; another increases from 7,000 to 13,000 after one year. Curiously, for various libraries CURRSER decreased significantly from 1973-74 to 1974-75, although one might have supposed that the change in the ARL category from periodicals to serials would have led to increases. One would be well-advised to take this category, before about 1974-75, with a grain or two of salt.

As was seen earlier, there are apparently also differences among libraries in respect to whether materials like government documents and monographic serials have been counted in CURRSER.

Part 3: Interlibrary Loans

11. Originals loaned (ILLORIG)
12. Photocopies loaned (ILLCOP)
13. Total loaned (ILLTOT)
14. Originals borrowed (ILBORIG)
15. Photocopies borrowed (ILBCOP)
16. Total borrowed (ILBTOT)

Data for these six categories reported for 1973-74 through 1978-79. ILLTOT = ILLORIG plus ILLCOP; ILBTOT = ILBORIG plus ILBCOP.

Part 4: Expenditures

17. Library materials expenditures (EXPLM): Reported for all years. EXPLM includes expenditures for monographic volumes, serials, and microforms, as well as for materials not counted in these data--for example, manuscripts, phonorecords, maps, slides, and other non-print media. It is sometimes assumed that for a given institution the result of EXPLM divided by VOLSADG is a cost per volume. This is at best only approximately true. There is more in EXPLM than expenditures for volumes; and there is more, or less, in VOLSADG than volumes acquired. The ARL data do not offer any means of obtaining accurate statistics on costs per volume.

18. Current serials expenditures (EXPSER): Reported for 1975-76 through 1978-79. For 1975-76 through 1977-78 EXPSER was called "Current Periodicals" in the annual ARL statistics; for 1978-79 it was called "Current Serials." But in the ARL statistics questionnaires for 1975-76 and 1976-77 the same definition of periodicals was used that was then used of serials in 1977-78 and 1978-79. See category 10, Current Serials, above for other comments on the periodicals-serials ambiguities in the ARL data.

Just as libraries have seemed uncertain what to count in the category CURRSER, similarly they have wavered in their interpretations of EXPSER. One library reports $500,000 one year, $800,000 the next, but an increase of only 300 CURRSER in that period; another library reports a decrease of $100,000 in EXPSER but an increase of 1,700 CURRSER; and so on. Like CURRSER, EXPSER needs to be handled with much caution.

19. Binding expenditures (EXPBND): Reported for all years.

20. Total salaries (TOTSAL): Reported for all years. TOTSAL includes salary expenditures for professional and non-professional staff, wages for student assistants, and other expenditures for personnel. It is not

intended to include costs of fringe benefits; but in some cases these costs may have been included.

21. Other Operating Expenditures (OPEXP): Reported for all years. OPEXP is a catch-all category for any expenditures other than those for library materials, binding, and personnel. In recent years in some institutions the costs of library automation are included in OPEXP; in others they are assumed instead by the universities.

22. Total Expenditures (TOTEXP): Reported for all years. TOTEXP = EXPLM plus EXPBND plus TOTSAL plus OPEXP. For this cumulation TOTEXP was newly calculated from the data. Thus, in some cases TOTEXP in this work differs from the values reported in the annual ARL statistics (that is, where the original values were reported incorrectly). In this work for any library where EXPLM or EXPBND or TOTSAL or OPEXP is missing, TOTSAL is also missing.

Part 5: Personnel

23. Professional Staff (PRFSTF): Reported for all years. For 1962-63 through 1966-67 fractional parts of FTE professionals were permitted by ARL instructions. Consequently, in the early years there are reports of 47.5 or 21.7 or 159.74, etc., professionals. From 1967-68 the numbers of FTE professionals are rounded to the nearest whole number.

PRFSTF has been susceptible to differing interpretations over the years. First, the criteria for determining professional status even now vary among libraries; and so it has been left to each library to decide who is to be counted as a professional. Second, there has been some uncertainty whether to count only filled positions or filled plus budgeted but temporarily vacant positions. Until the last year or two, the ARL Statistics tended to report full-time equivalents of filled full-time and part-time professional positions; whereas the Annual Salary Survey reported budgeted full-time positions only. Third, the definition of FTE has been left to each library to define on the basis of its own work week.

24. Non-professional staff (NPRFSTF): Reported for all years. Most of the comments on PRFSTF above also apply to NPRFSTF.

25. Student assistants (STUDAST): Reported for all years. For 1962-63 through 1966-67 the data are reported in hours; for 1967-68 through 1978-79 in full-time equivalents, rounded to the nearest whole number.

26. Total prof and non-prof staff (TOTSTF): Reported for all years. TOTSTF = PRFSTF plus NPRFSTF. For this cumulation TOTSTF was newly calculated from the data. Consequently, in some cases TOTSTF in this work differs from the values recorded in the annual ARL statistics. In this cumulation for any library where PRFSTF or NPRFSTF is missing, TOTSTF is also missing.

Note that in the annual ARL statistics the category called "Total Staff" equalled Prof. Staff plus Non-Prof. Staff for 1962-63 through 1973-74. For 1974-75 through the present "Total Staff" equals Prof. Staff plus Non-Prof. Staff plus Student Assts. in the annual ARL statistics.

27. Beginning salary (BEGSAL): Reported for all years. Sources: 1962-63 through 1967-68 from annual ARL statistics; 1968-69 through 1978-79 from ARL annual salary surveys. BEGSAL is the lowest salary designated to be paid to a beginning professional in an entry-level position. It is not necessarily the lowest professional salary actually paid by a given library.

28. Median salary (MEDSAL): Reported for 1968-69 through 1978-79. Source: ARL annual salary surveys. MEDSAL is the median salary for budgeted (but not necessarily filled) full-time professional positions.

Part 6: University Data

29. Total enrollment (TOTSTU): Reported for 1966-67 through 1978-79 for U.S. institutions; 1975-76 through 1978-79 for Canadian institutions. Sources: For U.S. institutions, from computer tapes prepared by the U.S. National Center for Education Statistics, from its HEGIS Data Files OFE, Opening Fall Enrollment; for Canadian institutions, from annual ARL statistics. The NCES data are for total full-time students. Total full-time students currently are reported by each U.S. institution to NCES on NCES Form 2300-2.3, line 14 columns 13 and 14. Note that TOTSTU is the headcount of full-time undergraduates, first-professional students, graduate students, and unclassified students; part-time students are not included here. Note also that, for example, TOTSTU for 1966-67 is the opening fall enrollment for fall, 1966.

Some institutions have variously included or excluded branch campuses in reporting ARL data throughout the years. For instance, Pennsylvania State reported data for its Hershey Medical Center through 1970-71, then excluded it thereafter, although other branch campuses continued to be recorded. We have tried to include or exclude appropriate NCES data in accord with the inclusion or exclusion of branches. In some cases, however, especially in the statistics for the early seventies, it is not possible to determine exactly what some institutions were including in the ARL statistics.

The eccentricities of the NCES enrollment data have been commented upon in section 2 of this introduction.

30. Graduate students (GRADSTU): Reported for 1967-68 through 1978-79 for U.S. institutions; 1975-76 through 1978-79 for Canadian institutions. Sources: As above, for TOTSTU. GRADSTU, however, is equivalent to line 11, columns 13 and 14, of NCES Form 2300-2.3. GRADSTU is thus the headcount of full-time graduate students only; first-professional

students and all part-time students are excluded from GRADSTU.

The other comments above for TOTSTU are applicable here. In addition, it is worth noting that for many of those U.S. institutions reporting GRADSTU from 1967-68 through 1978-79, there are sharp decreases in the numbers of graduate students between 1968-69 and 1969-70. These decreases are undoubtedly due to faulty data in 1967-69; but it has not been possible to trace the source of these peculiarities.

31. PHD's awarded (PHDAWD): Reported for all years for U.S. institutions; 1971-72 through 1978-79 for Canadian institutions. Sources: For U.S. institutions, for 1962-63--1976-77, from a computer tape prepared by the National Research Council, Commission on Human Resources, from its Doctorate Records File; for U.S. institutions for 1977-78--1978-79, and for Canadian institutions, from annual ARL statistics. The NRC data include Ph.D.'s, Sc.D.'s, and D.M.A.'s for 1962-63 through 1971-72; Ph.D.'s and Sc.D.'s for 1972-73 through 1976-77. The data from the annual ARL statistics are intended to include only Ph.D.'s.

32. PHD fields (PHDFLD): Reported for 1971-72 through 1978-79. Source: Annual ARL statistics. PHDFLD is intended to report the number of subject fields in which PH.D. degrees may be awarded in an institution. Ph.D. fields are equivalent to the several hundred specific discipline specialties enumerated in NCES Form 2300-2.1A.

33. Federal support (FEDSUP): Reported for 1970-71 through 1977-78 for U.S. institutions only. Source: Computer tape prepared by Moshman Associates from the National Science Foundation Survey of Federal Support to Universities, Colleges, and Selected Nonprofit Institutions. FEDSUP represents the total, for all activities (academic science and non-science), of federal obligations to each university. Note that FEDSUP measures only U.S. government obligations, but not grants and obligations of private foundations.

For the years 1970-71 through 1975-76 the FEDSUP data are for the July 1-June 30 fiscal years. For 1976-77 through 1977-78 they are for the October 1-Sept. 30 fiscal years of the U.S. government.[5]

The information under Total enrollment above concerning the treatment of branch campuses also applies to FEDSUP.

34. University expenditures (UNIVEXP): Reported for 1970-71 through 1977-78 for U.S. institutions only. Source: Computer tape prepared by the NCES from its HEGIS Data File FIN, Finance. The NCES data are for university total current funds expenditures and mandatory transfers. Current funds expenditures and mandatory transfers are currently reported to NCES on its Form 2300-4, Part B, Line 19.

For comments on branch campuses and problems with the NCES data, see Total enrollment and Federal support above.

4. Machine-Readable Data

The data in this cumulation are also available on computer tape. The records are written on magnetic tape in card-image form, with a logical record length of 80 characters. The records are blocked by a factor of 100 for a physical block length of 8000 bytes. The storage code is 9-track ASCII at 1600 bpi. The tape consists of a single file; there are no internal label records.

The file comprises 4002 data records in fixed fields. The first 4-character field of each record is a sequence number (RECNO), from 0001 to 4002. There are 3 records per case, or institution; 1334 cases are represented in the file. Following the RECNO, the first field for each case is YEAR, a 2-character field denoting the year of the data. In YEAR, 63 = 1962-63, 64 = 1963-64, ... 79 = 1978-79. Following YEAR are data fields corresponding to the variables discussed above in section 3 of this introduction. Thus, the file is sequenced in ascending order by year, within years by institution number, and within institution number by record type.

The complete format of the data file is shown in Figure 1.

Within each year only those cases (institutions) are present for which at least some data are available. For example, Alabama did not begin reporting until 1966-67; and so Alabama does not appear in the file before YEAR 67. Missing data in the file are systematically replaced by zeros. Thus, Boston did not report volumes added net in 1962-63; and in YEAR 63 VOLSADN for Boston is 00000000.

A dump of the first 40 records in the data file is displayed in Figure 2.

The ARL data file can be used with standard statistical packages, such as SPSS, BMDP, and SAS. The arrangement by year and by institution within years makes the file particularly useful for cross-sectional analysis. Time series analysis is not quite so convenient, but can be accomplished through the file-modification capabilities of the statistical packages.

Figure 3 shows a sample SPSS program that can be used with the file. This program creates an SPSS system file named ARLDATA with 17 subfiles (YR63, YR64, ... YR79), one subfile for each year of data. From the variables in the data the program computes and saves the two additional variables TOTEXP (Total expenditures) and TOTSTF (Total prof. and non-prof. staff). The program also incidentally calculates the mean and other statistics for VOLS for 1962-63 and PHDFLD for 1978-79. (The mean of VOLS for YR63 is 1,406,632.937; the mean of PHDFLD for YR79 is 52.196.)

The ARL data file is currently maintained at the University of Virginia Library. As each year of ARL data after 1978-79 becomes available, it will be added to this file, which will serve as a master file of the ARL data in machine-readable form. Any errors in the data should be reported to the ARL Office, and corrections will be incorporated in the master file.

****

In carrying through this work, we owe thanks for their encouragement and patience to Suzanne Frankie, former Associate Executive Director of the ARL and now Director of Public Services at the New York University Library, who first conceived the idea of putting the ARL data into machine-readable form; to Carol Mandel, ARL Associate Executive Director; and to Richard Talbot, Director of Libraries at the University of Massachusetts and Chairman of the Committee on ARL Statistics.

5. Notes

1. The successive titles of the series are:

1919-20--1939-40:	Statistics of university libraries
1940-41--1961-62:	Statistics for college and university libraries (with variant t tles in 1940-41--1942-43)
1961-62--1962-63:	Association of research libraries statistics
1963-64--1973-74:	Academic library statistics
1974-75-- :	ARL statistics

2. Association of Research Libraries, Annual Salary Survey 1978-1979 (Washington: ARL, 1980), p. 29. Note, however, that in the Salary Survey the code numbers for the South are in a different order: 05, South Atlantic, in this cumulation is 7 in the Survey: 06, East South Central, is 5; 07, West South Central, is 6.

3. George Piternick, "ARL Statistics--Handle with Care," College & Research Libraries, 38 (September, 1977), 419-423.

4. In addition, the ARL statistics questionnaire in 1973-74 asked for "current serials including periodicals" but in the annual edition called this category "Current Periodicals." In the following year the questionnaire requested "current periodicals," but the printed edition called the category "Current Serials."

5. The period July 1-September 30, 1976, when the government changed from a July 1-June 30 to an Oct. 1-Sept. 30 fiscal year is known as the Transition Quarter. Federal obligations during this three-month period are not represented in FEDSUP.

THE DATA, 1962-63--1978-79
